Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1, 3-10, 12-18 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over all pending claims of copending Application No. 10/365332. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present claims are broader in scope than the patented claims.

Application/Control Number: 10/767,708

Art Unit: 2871

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-4, 6-7, 10-13 and 15-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hashimoto (US 665690).

Hashimoto discloses a liquid crystal display device comprising (see at least Figure 1): a liquid crystal layer 6; a j-retarder (disposed on the liquid crystal layer; the j-retarder comprising a simultaneous biaxially stretched polymeric film being substantially non-absorbing and non-scattering for at least one polarization state of visible light; and having x, y, and z orthogonal indices of refraction wherein at least two of the orthogonal indices of refraction are not equal (see at least col. 11, lines 65-67), an in-plane retardance being 100 nm or less (see at least col. 7, lines 46-52 and col. 9, lines 16-20), noted that overlapping ranges have been held as at least obvious) and an absolute value of an out-of-plane retardance being 55 nm or greater (see at least col. 7, line 46-52 and col. 9, lines 16-20, noted that overlapping ranges have been held as at least obvious).

Application/Control Number: 10/767,708

Art Unit: 2871

Hashimoto discloses the LCD device comprising a polarizer 2a/2b disposed on the retarder.

The use of an additional liquid crystal layer is common and known in the art for advantages such as different switching modes, i.e., swapping background color. Therefore, it would have been obvious to one of ordinary skill in the art to employ an additional liquid crystal layer, as common and known in the art, for advantages such as different switching modes, i.e., swapping background color.

5. Claims 5, 8-9, 14 and 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hashimoto as applied to claims 1-4, 6-7, 10-13 and 15-16 above, and further in view of Broer et al (US 6359670).

Broer teaches the use of a reflecting polarizer disposed on the exterior surface of a polarizer in an LCD device yields advantages such as achieve optimum reflection of light.

Therefore, it would have been obvious to one of ordinary skill in the art to employ a reflecting polarizer (so as the absorbing polarizer layer is disposed between the liquid crystal layer/retarder layer and the reflective polarizer layer) for achieving advantages such as optimum reflection of light.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Application/Control Number: 10/767,708 Page 5
